

# Kutumb

## Overview

Scope of the project was to develop an iOS App of a community platform and keep the members updated about new trends. The product required access for individual members to create their own communities.

## Challenges

- Multiple language support on the platform.
- Firebase implementation for deep linking.
- Joint community flow with deep links and Universal links.

## Technologies Used

- iOS
- SQLite
- Swift 5.2
- Figma for UI designs

## Solutions

- Native localization support for iOS to include localized strings.
- User shareable deep links creation in the application itself.
- Shared apple-app-site-association file to the client to be added in their respective domains.
