

# Fluxo Payments

## Overview

Fluxo Payments is a B2B payment platform for SMBs to enable a quick and hassle-free bill clearance without getting stuck into the traditional method of fund transfer. By using this platform, users can upload their bills and pay via available payment modes including credit cards.

## Challenges

- To make the case study from every user perspective.
- The kind of data that needs to be available for seamless access by the user.
- To accommodate various service providers for multiple role management.
- Exact status of emergency services availability at various health care centers.

## Technologies Used

- Node.js, Express.js, React with Redux
- Cashfree, Sendgrid, Firebase, Kaleyra
- AWS S3 bucket
- MongoDB

## Solutions

- By adding its contact and bank details.
- Use S3 bucket for uploading invoice. For notifications, we are using third party email and SMS service.
- Used cashfree in which it provides seamless support and minimum down time.
- Created separate link at company level and it will have unique payment id.
