

# Opinito- The next evolution in Social Networking

## Overview

Opinito automatically networks you with other users who share your likes and dislikes. You can just interact with your network the way you would interact on any other social networking site. You can start posting your opinions, comment, likes, dislikes on other's posts, and much more.

## Challenges

- Best coding practice is used for the code optimization.
- Store all the Media in Amazon S3 service.
- Merge API's whenever required.
- Showing geographically based data in Low Speed Internet.

## Technologies Used

- Android & iOS
- React.js, Node.js, Java
- Swift
- Redux

## Solutions

- Store Proc is used to solve the problem of SQL injections.
- Cron job for the automation.
- JWT token is implemented for the security purpose.
