

Eggoz

Overview

It consisted of a supply chain management system, an E-commerce app and a Farmers app. Our main objective was to create a portal to connect Distributors, Retailers, Managers, Sales managers, Regional Managers and Warehouses to automate the necessary activities. Other objectives were to create an E-commerce platform for selling products to regular customers.

Challenges

- Implement pdf generated docs based on dynamic data.
- Automate as many flows as possible in the portal.
- Subscription flow in eCommerce app.
- Wallet integration with subscription model.

Technologies Used

- Adobe Xd
- Android
- React.js, Django
- AWS EC2, AWS S3
- Docker, Cashfree

Solutions

- Created reusable utilities for pdf generation and bill generation.
- Implemented reusable components for table data.
- Created pdf generator function based on requirement of data.
- IP was used in place of domain to avoid public access of operations.
