About Project

Edwisely, an innovative educational technology platform, empowers colleges across India by offering a user-friendly solution to assess their academic excellence. By leveraging NAAC and NIRF rankings, colleges can effortlessly gauge their performance and improvements.

The Challenges

Crafting the UI dashboard posed a significant challenge due to the diverse backgrounds and varying levels of tech-savviness among the target audience. The key obstacle revolved around creating a user-friendly interface that catered to individuals with different levels of technological familiarity.

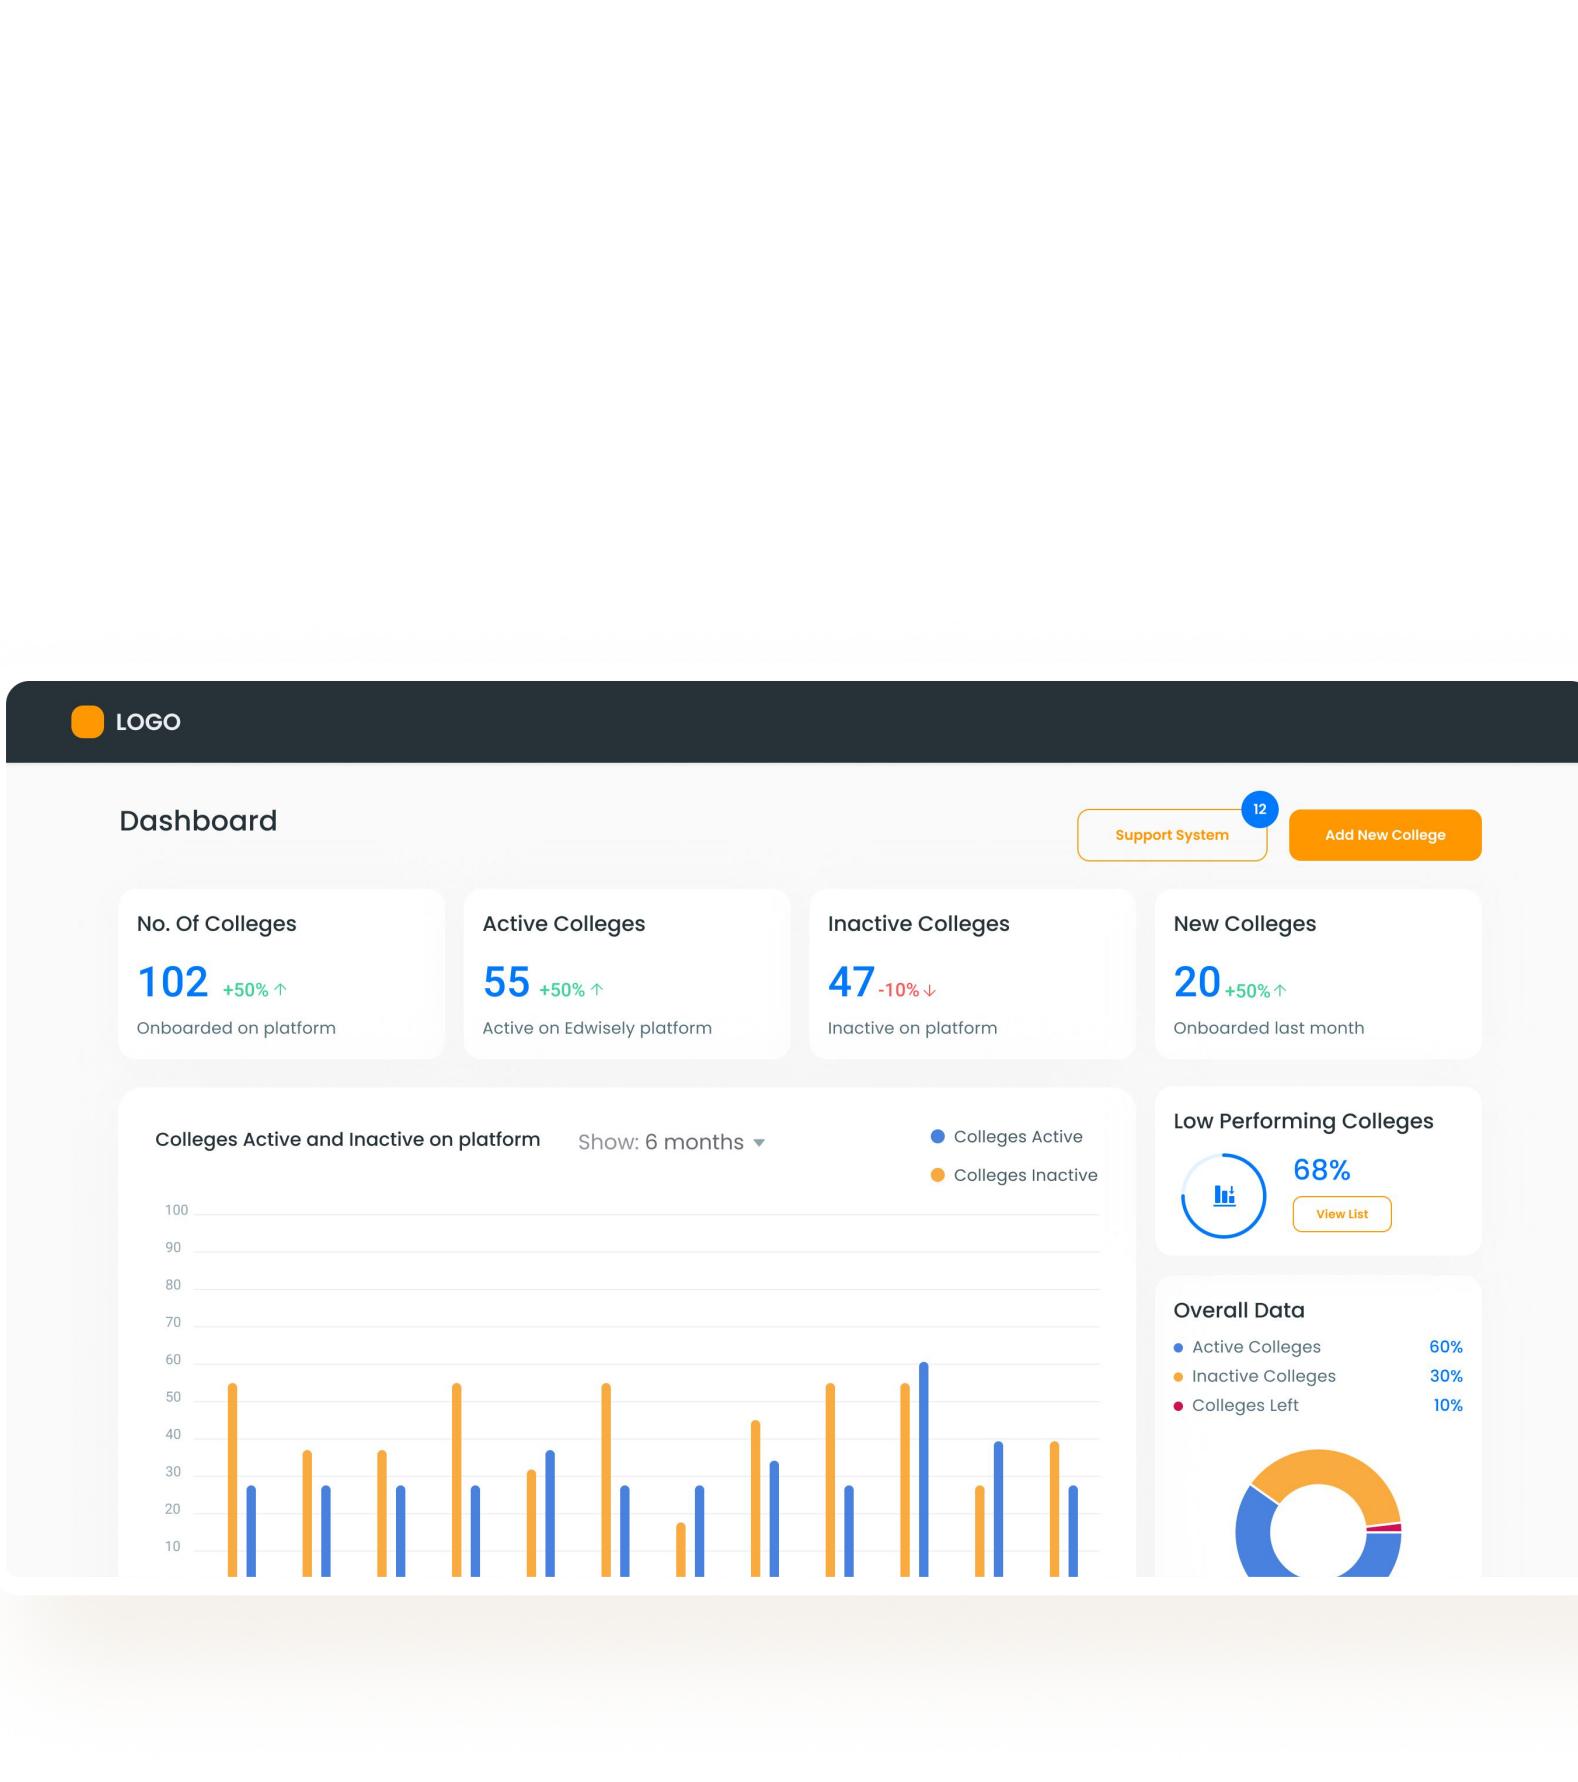

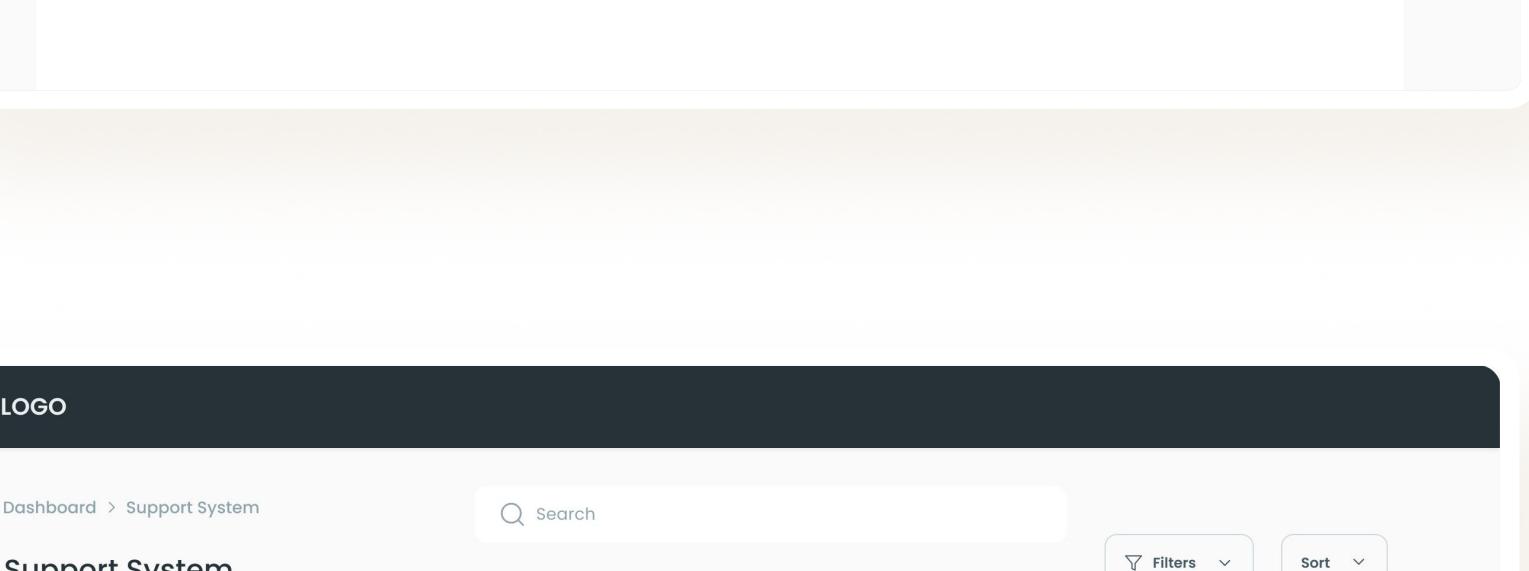

Our primary focus was on designing an intuitive dashboard that would be effortlessly navigable and understandable for all types of users, regardless of their backgrounds. Through thoughtful design choices and user-centric approaches, we successfully overcame this challenge, ensuring that the dashboard remained accessible and easy to use, even for those less familiar with technology.

The Solution

Edwisely was designed keeping in mind its target audience. The fonts and colors were chosen to represent the target region and give a fresh and friendlier feel to the Dashboard.
