UI Designer, UX Designer, Lead iOS Developer, iOS developer, React Developer, Devops Developer

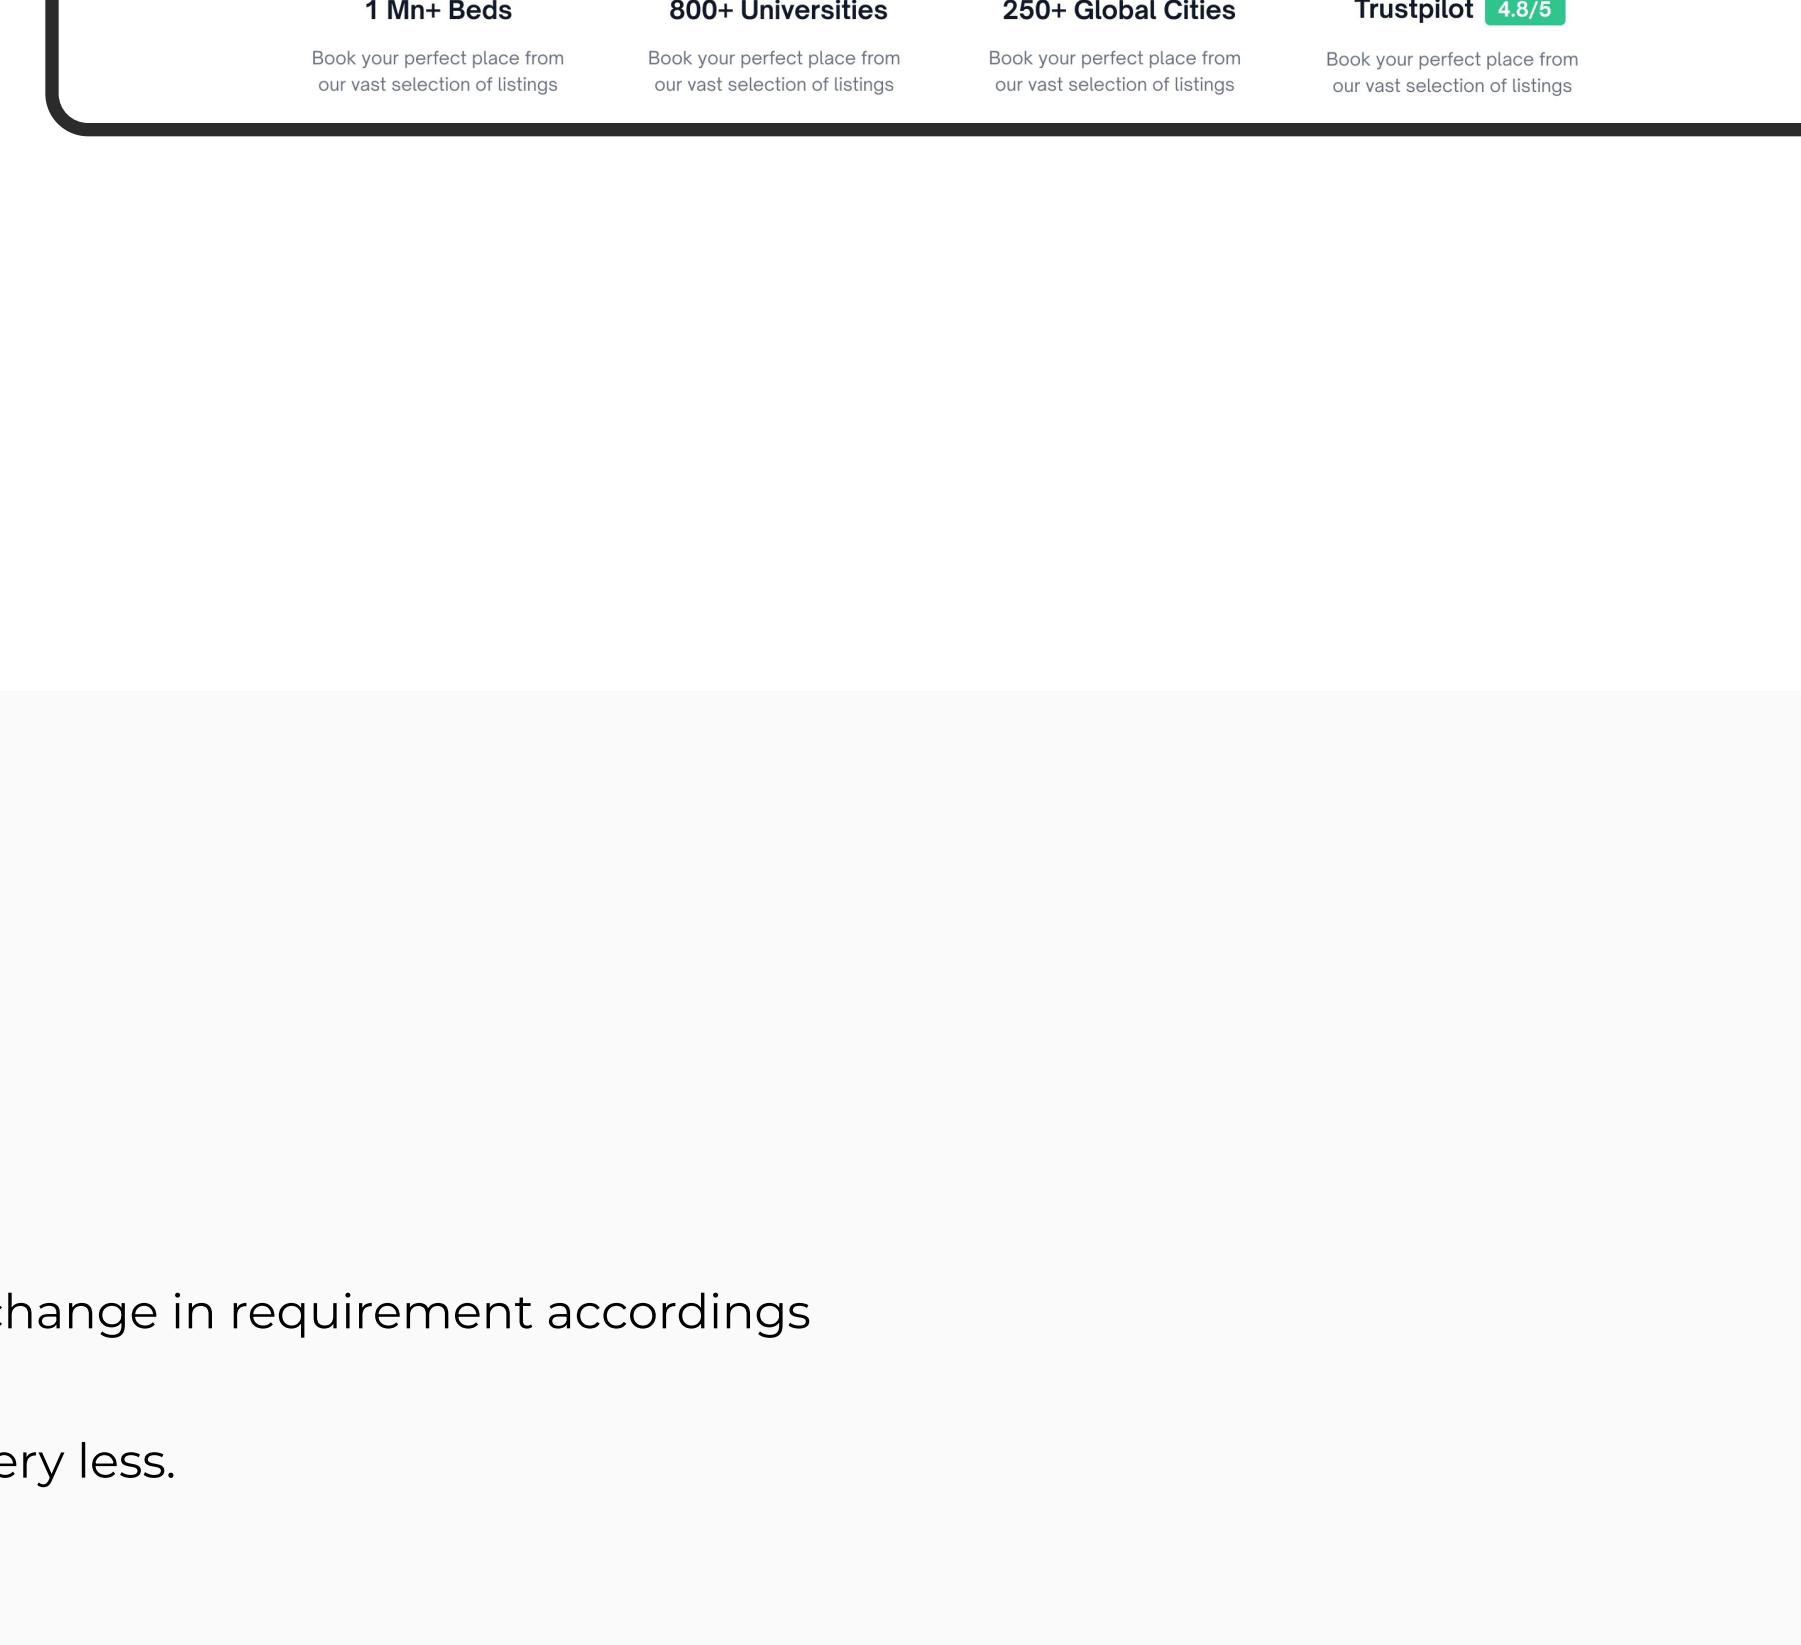

Process

Agile + Waterfall mixed project approach.

Project scope and requirements

Develop a web-based platform called Amber Student to assist students in finding suitable accommodations for their academic pursuits.

The project aims to streamline the process of finding suitable accommodation for students by offering a user-friendly platform with robust search functionality, reliable booking systems, and a supportive user community.

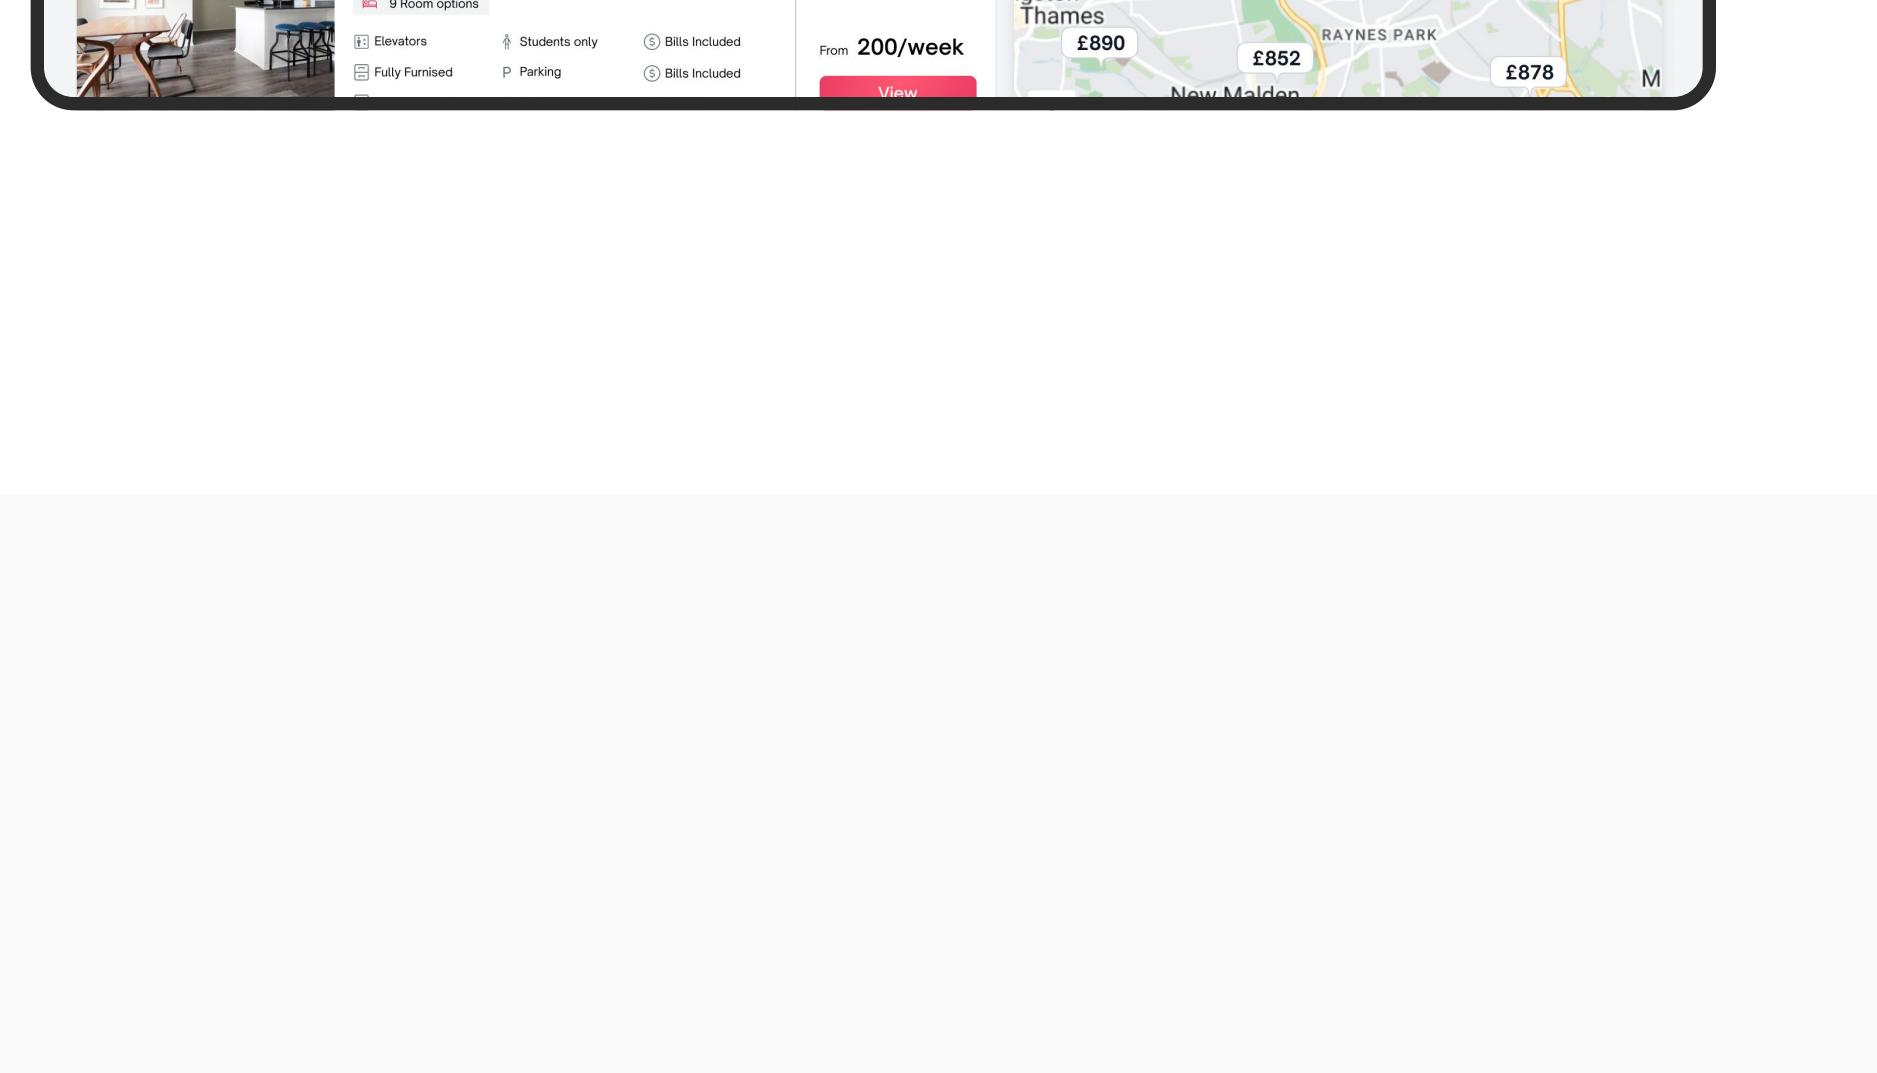

Challenge

As we are following agile process, frequent change in requirement accordings to user was a big challenge
Time required to develop the product was very less.

Solution

The solution is developed with scalability and reliability in mind, ensuring that the platform can handle a large number of users and accommodate future growth. Security measures will be implemented to safeguard user data and ensure a safe and trustworthy environment for all users. Regular updates and improvements will be made based on user feedback and market trends to enhance the overall user experience.

Outcome

The Project is Still Ongoing
