ANTINO

SafeXPay

Overview

Accelerating the adoption of seamless and digital payments experience to break the monotony of conventional payment services. To redefine the payment platform, Antino assisted Safexpay to construct diverse admin panels- Admin, Merchant, Aggregator, and Reseller, for acquiring the merchants seamlessly.

Technologies Used

- JavaScript
- React.js
- Redux Toolkit
- Git
- Bitbucket

Challenges

- Incorporating paymode configuration for diverse admin portals.
- Enabling real-time theme customization of the admin portal.
- Customizing date and time format to filter the data.
- Uploading multiple files to S3 bucket.

Solutions

- To overcome complex paymode configuration, we successfully integrated API by using the static data to develop a boilerplate.
- Introduced a component consisting sidebar and main parts of the admin portal to customize the theme in real-time using API.
- Developed a custom component to streamline the date and time as per the backend requirements.
- Created a custom reusable component for uploading multiple files to S3 bucket.
